## Governance is a Top Priority

***“As dynamic computing initiative such as SOA and virtualization begin to take root, IT decision makers are finding that more robust IT governance capabilities are necessary to make coordinated decisions across increasingly interdependent technology domains.”***

*Five Ways the Rise of IT Governance Will Change How Enterprises Buy IT*  
Summit Strategies Report, Dec. 2005

***“Supporting changes in corporate governance to address regulations like Sarbanes-Oxley is the top priority for North American enterprises with more than 20,000 employees, and it’s a priority for half of all North American enterprises.”***

*Software Configuration Management Tools Ease  
The Burden Of Compliance*

# Software delivery challenges for On Demand Business

## On Demand Business focus

- **Responsiveness** as a key competency
- **Effectiveness** of people as a critical success factor
- **Revenue growth** with cost containment

## Software delivery challenges<sup>1</sup>

- Keeping software projects **aligned** with changing business priorities
- Delivering better **business results** within the constraints of current investments and skill sets
- **Effectively managing** business and technical **risk**

<sup>1</sup> IBM Rational research, November 2005

# IT Governance challenges: Measuring impact on Business

**Inability to align and prioritize IT investments against business goals** results in sub-optimal use of IT resources

**Missed New Business Opportunities**

**Inability to monitor project and portfolio metrics** prevents accountability and cost control and results in risky “go-live” decisions

**Overruns, Customer Dissatisfaction**

**Inability to communicate policies implement controls and document compliance** results in painstaking manual efforts

**Inefficient processes, compliance risk**

**Inability to monitor key business systems health and service level agreement status** results in system down-time

**Lost Revenue or Productivity**

**Inability to automate governance policies from definition to execution** to assure execution of strategy

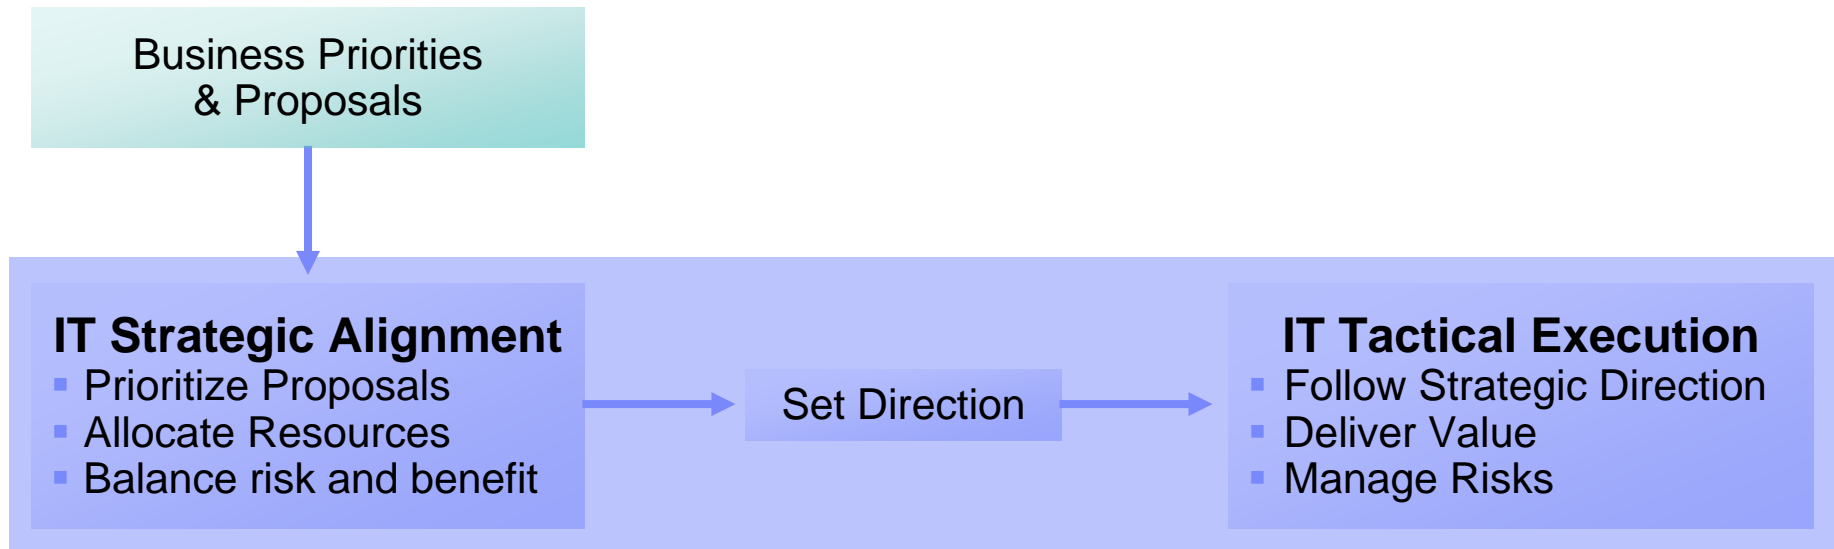

**Compliance and Integrity gaps**

# A Static View of IT Governance is not Enough

- IT Governance is a framework for strategic decision making and communication that aligns IT with the business.

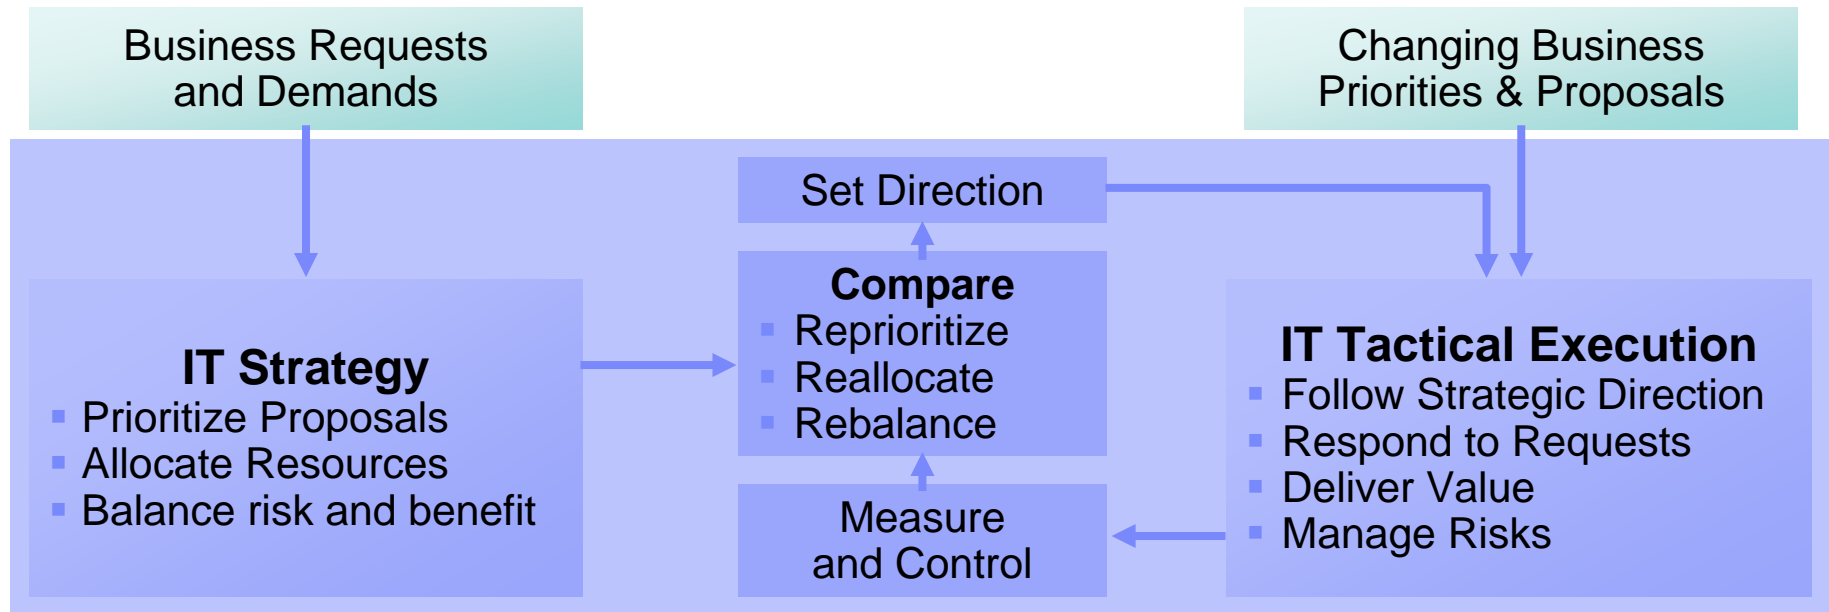

***Most financial institutions lack both the data and the business-oriented metrics needed to measure returns on IT investments, so accepting the status quo offers little chance for performance improvement.***

*"Reaching efficient frontiers in IT investment management" IBM Institute for Business Value, Dec 2004*

## Solution: Dynamic View of Governance

- Dynamic view – IT Governance includes
  - ▶ Practices to ensure efficient execution in alignment with strategic objectives
  - ▶ Systematic risk management
  - ▶ Measurement and control systems to assess, direct and correct execution

***By 2008, more than 50 percent of large enterprises will use portfolio management techniques and tools for planning, prioritization, justification and communication (0.7 probability).***

# Global software delivery challenges: Disconnected

## Business Imperatives

*Innovation*

*Flexibility*

*Control Risk and Cost*

## Lost in Translation

### Unpredictability

- Broken builds, failed test cases
- Innovation “capital” tied up maintaining software
- Processes and people not aligned
- Lack of automation inhibits innovation

### Inconsistent delivery

- Example: Test strategy by site or project
- Overhead from regulatory compliance
- Lack of visibility into full lifecycle activities

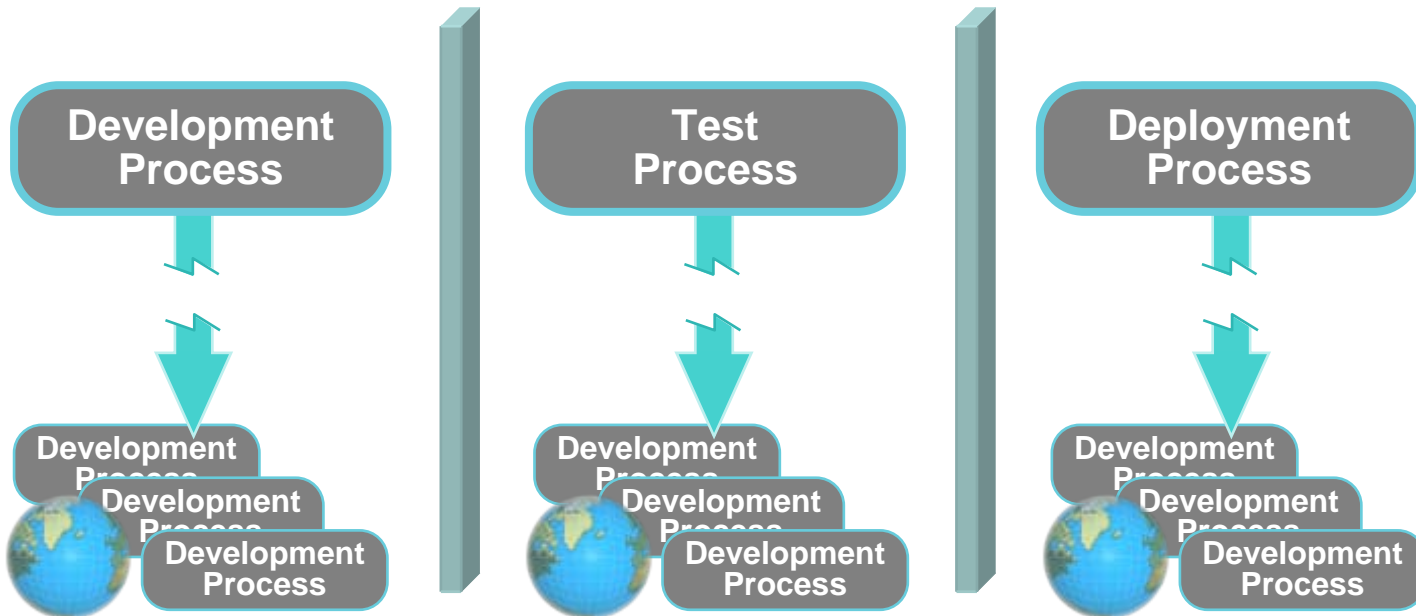

### Risks unknown “black holes”

- Example: Fire drills on project status
- No single point view of global efforts
- Inconsistent audit and traceability
- Language and platform inconsistencies

## Root cause: Software process silos

*Software delivery not governed as a core business process*

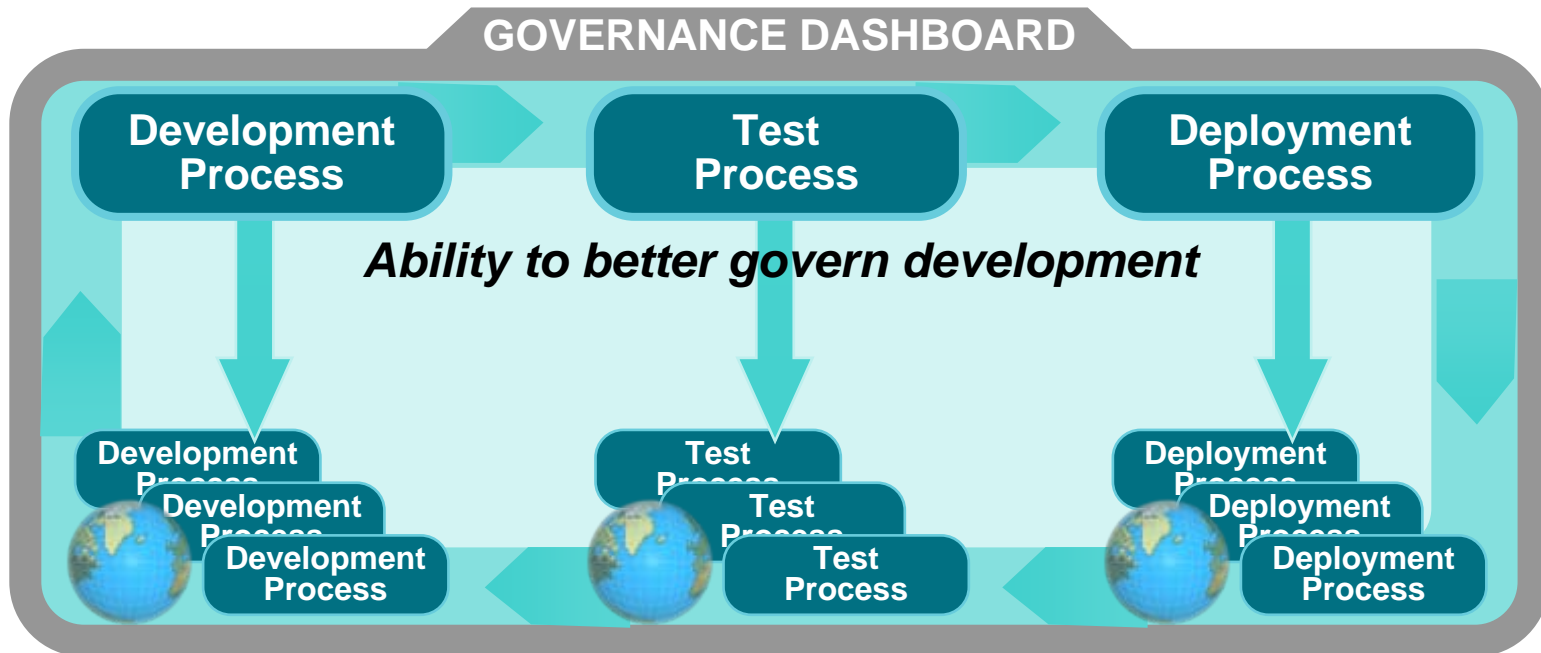

### Challenges

- Unique processes for each silo; poor communication between silos
- Best practices and processes not shared across silos
- Geographic distribution exacerbates situation
- Inability to innovate

# Solution: Improve global software delivery

*Break down the silos!*

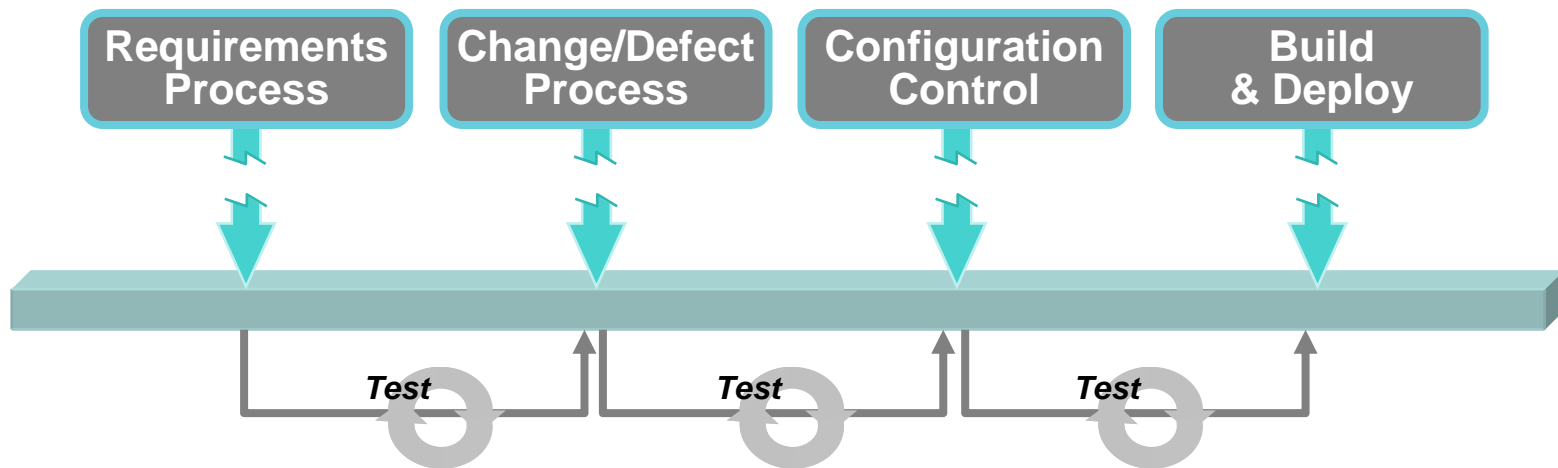

## Result: A more effective software supply chain

- Gain strategic alignment and reduce risk and costs
- Leverage and reuse assets through better automation of processes
- Unlock innovation opportunities at the “intersections” between processes

# Challenge: Silos between development and test

- Difficulty customizing and enforcing test process and best practice
- Use of separate tools hampers full project view

# Solution: Automated global test management

## *New IBM Rational ClearQuest v7 test management capabilities*

- Coordination of globally distributed testing
- Single project view including quality metrics and status
- Extensible test management ecosystem

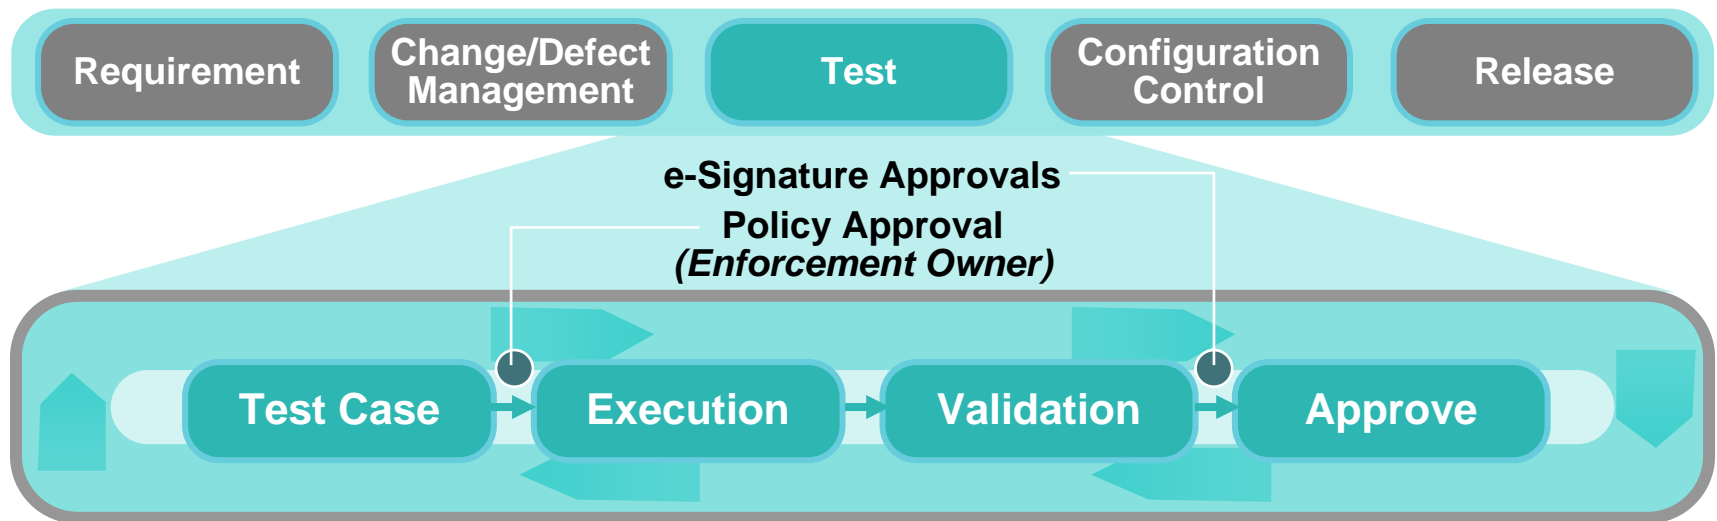

# Solution: Configurable, enforceable test processes

*Configurable workflows easily enable test management best practices*

- Auditable test change history
- e-Signature support for improving regulatory compliance management
- Project security

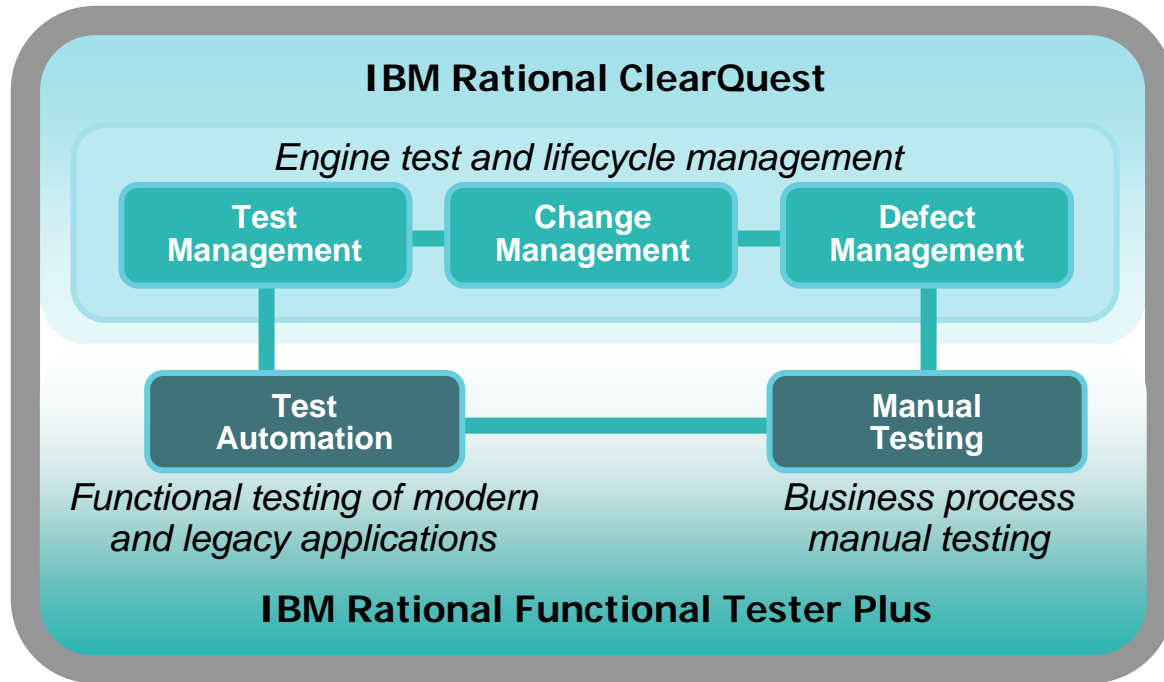

# Solution: Complete test management and automation

## *IBM Rational ClearQuest and Rational Functional Tester Plus*

- New bundle for complete test lab management and test automation
- Available upgrade for existing customers who want to adopt a more holistic and integrated lifecycle approach to testing

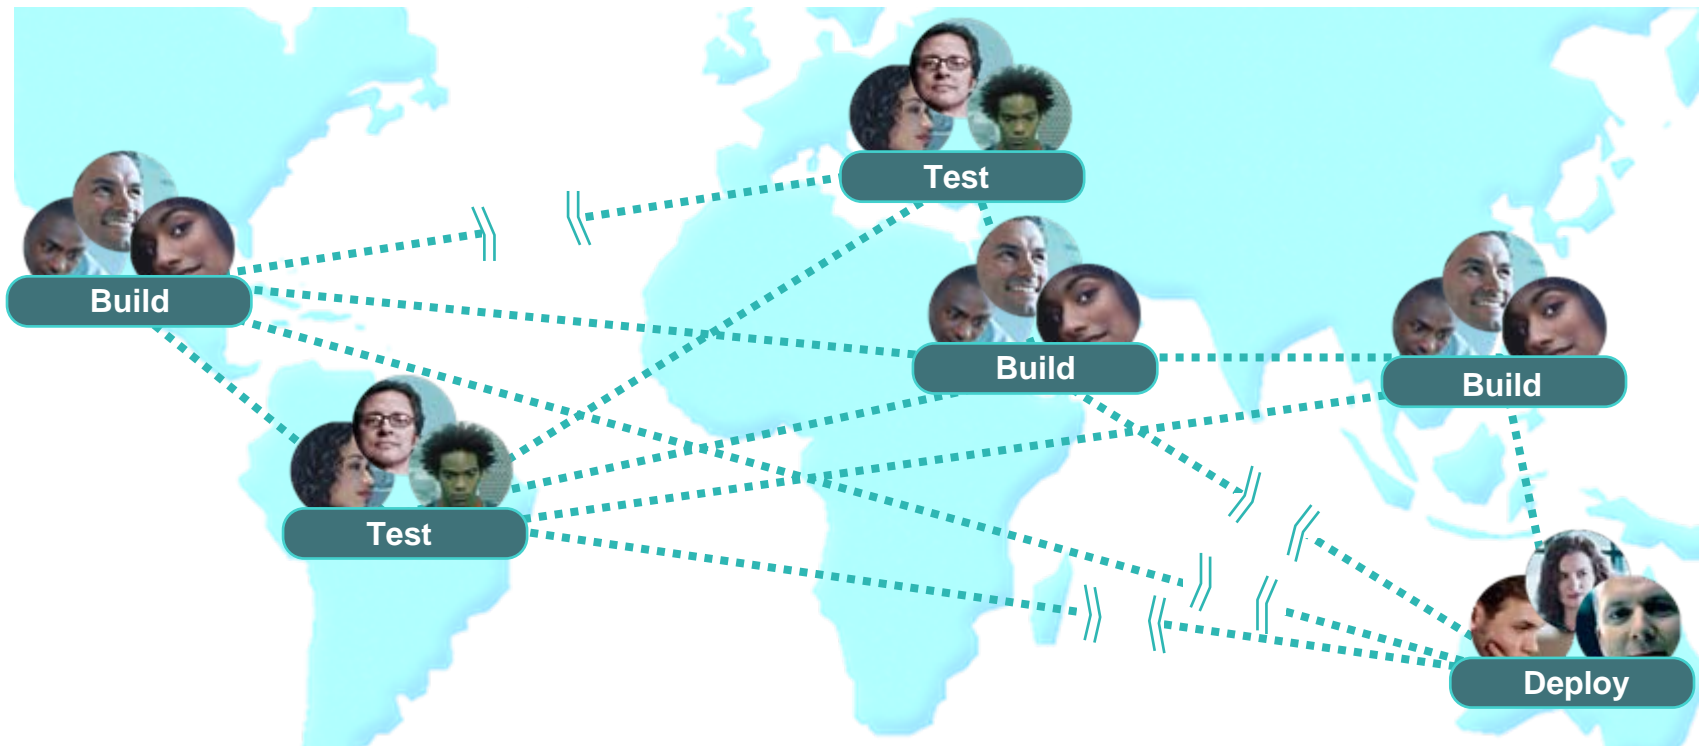

*IBM Rational ClearQuest

# Challenge: Local Needs in Global World

- Participate in a project that's not using your language
- Have an user interface you can understand
- Make use of latest platform improvements
- Options when choosing an interface

# Solution: Unicode support for native-language access to global change management information

- Freedom to mix OS clients
  - ▶ Example: Japanese & English in same deployment
  - ▶ Support for mixed language environments
  - ▶ Share common code page regardless of system language
- Non-ASCII support on UNIX
- New Translations:
  - ▶ New IBM Rational ClearQuest
    - Simplified Chinese
    - ClearCase .Net
      - German, French, Italian, Brazilian Portuguese, Spanish, Japanese, Korean, Simplified and Traditional Chinese

# Solution: Improved remote access and Web clients

- One native IBM Rational ClearQuest Client for all platforms
  - ▶ Eclipse-based
  - ▶ Connection management
  - ▶ XML export
  - ▶ Context-sensitive help
- IBM Rational ClearQuest web improvements
  - ▶ Link between record types
  - ▶ UCM change set versions
  - ▶ Web platform scalability enhancements

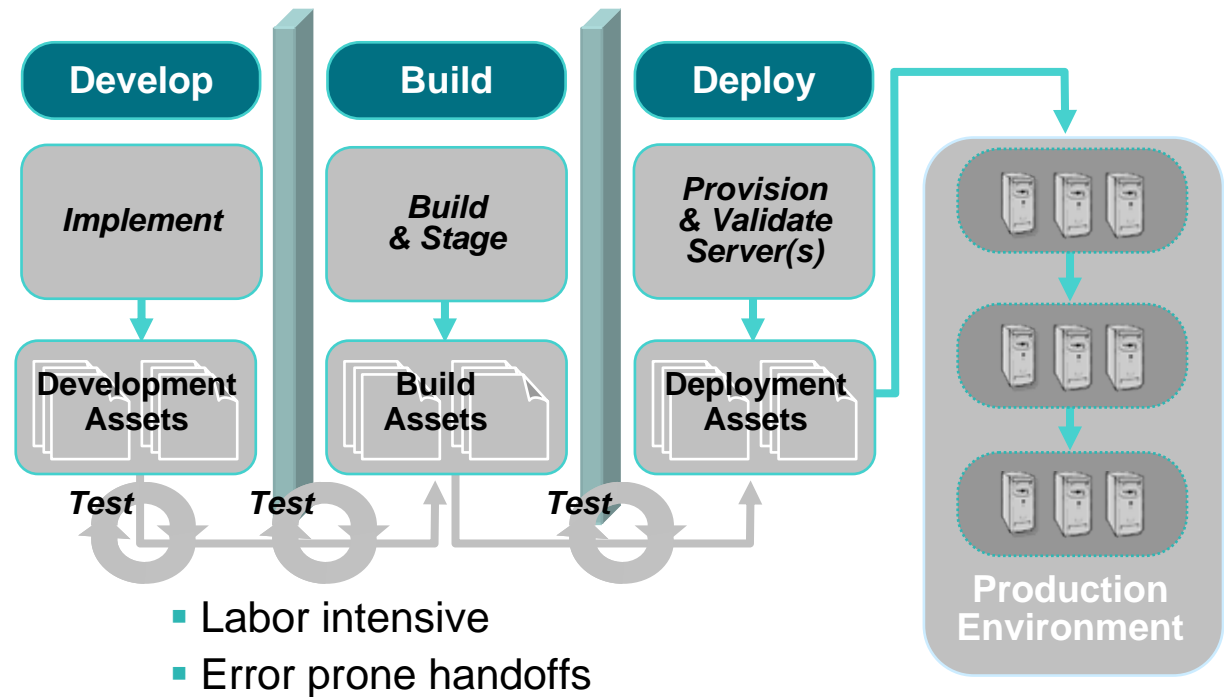

# Solution: Global traceability support **New!**

- Full lifecycle managed in CQ
  - ▶ Automatic Logging
  - ▶ eSignature support
  - ▶ MultiSite-able
- High scalability for large enterprise projects
- Coordinate geographically distributed testing
- Automates sharing and reuse of distributed test assets
- Around the world or around the corner

# Challenge: Silos Between Development, Build and Deployment

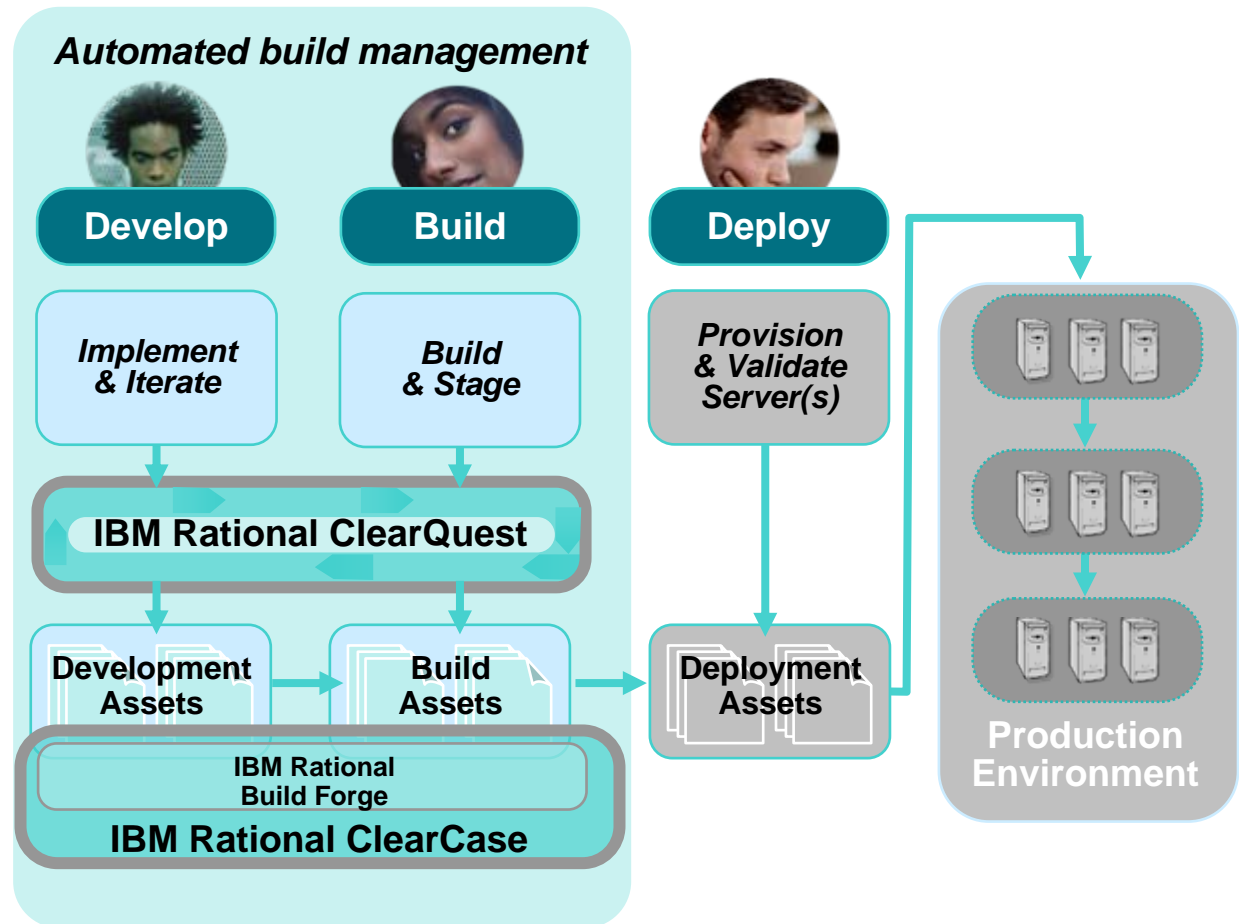

- Difficulty tracking testing status of multiple builds
- No shared processes, artifacts or controls
- “Over the wall” communication
- Minimal reuse

# Solution: Automated build management ▶ New!

## *New IBM Rational ClearQuest and IBM Rational ClearCase v7 with IBM Rational Build Forge v7 integration*

- Automated build management
- Detailed record of build content
- Support for continuous builds
- New IBM Rational ClearQuest build record for tracking and reporting

# Solution: Track audits and assets ▶ New!

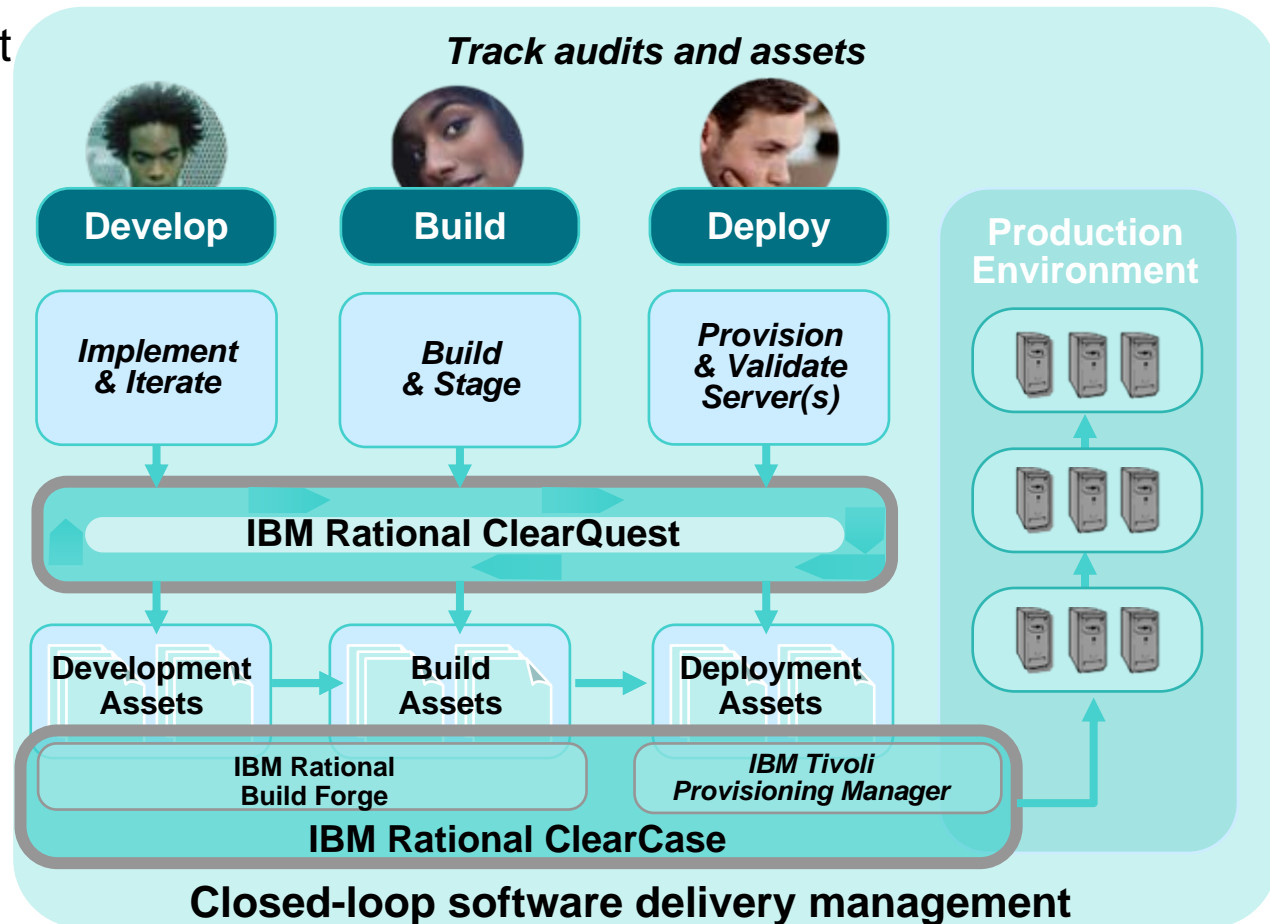

## *New IBM Rational ClearQuest and IBM Rational ClearCase v7 with IBM Tivoli Provisioning Manager integration*

- IBM Rational ClearQuest

- ▶ New deployment record
- ▶ ClearQuest logging and eSignature process enforcement
- ▶ Track information about assets in production

- IBM Tivoli Provisioning Manager

- ▶ Automated configuration and provisioning of multiple deployment environments
- ▶ Services view of production assets, rather than server-by-server

# Agenda

- Adding value to your software
- Business problems and solutions that impact software and systems delivery
- **Governance with IBM Rational Software Development Platform**
  - ▶ Process and Portfolio Management
  - ▶ Integrated Requirements Management
  - ▶ Accelerating the global software delivery lifecycle
- Product enhancements in release 7.0

# What is Process and Portfolio Management?

Process is the underlying structure that makes for successful implementation

- **Project Management** – initiating, planning, executing and closing projects while optimizing use of resources (time, money, people).
- **Program Management** – coordinated management of groups of projects.

Do things  
right

- **Portfolio Management** - evaluation, prioritization, budgeting, and selection of investments / initiatives (projects, assets, people) that provide the greatest value and contribution to the strategic interest of the organization. Includes ongoing monitoring of investments to measure returns.

Do the  
right  
things

**Decision  
Support**

Do we  
have the  
info  
needed to  
make  
decisions?

# What is process?

- Development processes define how development projects shall be executed.
  - One of the most common characteristics found within the many different definitions of process in literature is sequencing of phases and milestones expressing a lifecycle of the product under development.
  - Processes also define how to get from one milestone to the next by defining sequences of work, operations, or events that usually take up time, expertise, or other resources, and which produce some outcome.

# Why is process important?

## Consistency

- Enable clear, consistent communication for all team members
- Help team members understand their responsibilities and their relationship with other team members

## Predictability

- Help identify what resources are needed and when
- “Compare to” baseline for addressing bottlenecks and failure points
- Enables metric development to support future planning and estimation
- Defines decision points to reduce surprises
- More customer intimacy

## Quality

- Focus on risk reduction
- Roadmap of how value will be delivered to the customer

# What is the value of process?

Organizations perceive value in *their* business framework

## Improved operational excellence

### *Improved reputation*

- Attractiveness to customers (e.g., Level 4 SEI maturity, ISO 9000)
- Attractiveness to workforce

## Revenue growth

### *Better features/quality*

- Earlier market capture
- More customer intimacy
- Better products

## Cost savings

### *Better software economics*

- Faster development cycles
- Smaller teams
- More functionality per dollar

**Value = Positive Results Over Time**

# Business-Driven Development: Key Principles

- A** Adapt the process
- B** Balance stakeholder priorities
- C** Collaborate across teams
- D** Demonstrate value iteratively
- E** Elevate the level of abstraction
- F** Focus continuously on quality

# RUP: risk driven, a use-case based, architecture-centric, iterative software development process

# What Is Rational Method Composer?

# Terminology: Method Content versus Process

## Method Content

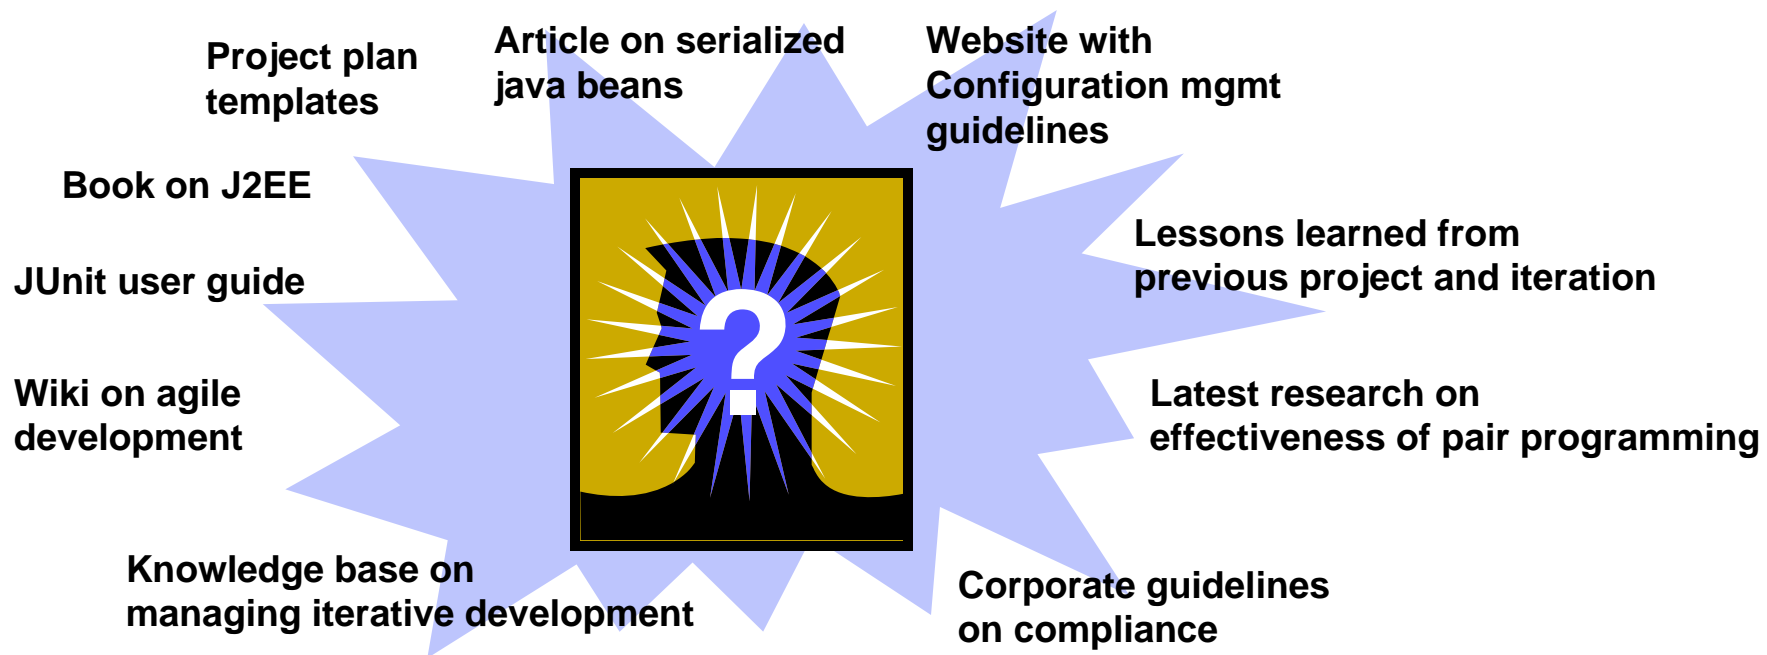

- Describes key reusable building blocks
- Step by step guidelines by which specific goals are approached (Roles, Work Products, Tasks, Guidance)
- General development techniques and practices, described lifecycle-independent (info you find in books)
- E.g. “Analyze Use Case Behavior”, “Develop component model”, etc.

## Process

- Applies method content for assembly of many different executable processes
- Specific to the scale/context of project (e.g. develop from scratch versus maintain ex. System or formal/high ceremony versus agile and self-organizing)
- Described with Breakdown Structures that refer to Method Content elements
- UMA defines two types of processes
  - ▶ Delivery Process: End-to-end project
  - ▶ Capability Pattern: reusable fragments

# What Development Teams Are Facing Today

- No **common language** or terminology between processes - redundancy and inconsistencies
- Knowledge cannot easily be **customized** for different projects or new best practices
- No **central community** or **communication framework** to facilitate convergence of best practices across domains

# A Better Approach

Standardize representation and manage libraries of reusable

# A role-based project portfolio management solution

# JSC “Svyazintek” enhances Program Management using Rational Portfolio Manager

**The Goal:** In the role of the Billing Transformation Program Prime Contractor JSC “Svyazintek” aims at enhancing and structuring Program Management areas to better manage the Program and track its realization.

**The Approach:** Automate key program and project management areas (planning, risk and issue mgt, document mgt, change mgt and reporting) by IBM Rational Portfolio Manager.

## Challenge

Be able to track and act quickly on Program and separate projects progress and issue resolution

Ensure transparent Program and projects reporting and realization control

## Benefits

- ✓ Well structured Program and projects’ planning to the level of separate workstream’s tasks;
- ✓ Risk, issue and change request management tightly aligned to the plan tracking;
- ✓ Better document (deliverables and work products) versioning and approval control.

# Contact Energy aligns Information Management and the business using Rational Portfolio Manager

**The Goal:** Contact Energy wanted to transform Information Management (IM) from a cost center to a strategic asset within the company.

**The Approach:** Aggressive organizational change to elevate IM credibility and performance supported and enforced by IBM Rational Portfolio Manager.

## Challenge

Be able to monitor and report on the success of projects

Ensure resources are invested in projects delivering business value

## Benefits

- ✓ Reporting Based on Real Data
- ✓ Improved Resource Utilization
- ✓ Real knowledge of true costs
- ✓ Positive funding decisions are based on business value
- ✓ IT has credibility with the business

***“Rational Portfolio Manager allows me to report—with certainty—the precise value IM has delivered, and will deliver, to the business. Leveraging the product, IM is now an essential partner in the Contact growth plan.”***

*Jos Kunnen, CIO, Contact Energy*

# Portfolio management at IBM enabled by Rational Portfolio Manager

## Benefits

- Project value – improved efficiency and effectiveness of project teams
- Business unit value – executive decision support, improved resource utilization, early detection/reduction of troubled projects, improved Gross Profit
- Corporate value – single investment stream of project management practices, tools and training, and supports project management profession and certification

## Examples

- “Rational Portfolio Manager has really opened up a window into the entire delivery world.”  
Richard Rothen IGS Application Management Services
- “As a geographically distributed organization, we use Rational Portfolio Manager to create a borderless resource environment.”  
Joe Londa, IBM Engineering & Technology Services
- Rational Portfolio Manager supports over 10,000 projects thousands of users in 60 countries worldwide

# Communicating Changes and Their Impact

- ✓ Email notification of changes
- ✓ Suspect links

The top screenshot shows a Microsoft Word document with several paragraphs of text. Red starburst annotations highlight specific phrases: "Secure Payment method", "Easy browsing for available titles", and "Ability to check the status of an order".

The bottom screenshot shows the Rational RequisitePro interface. It displays a table with columns for features (FEAT1 to FEAT5) and use cases (UCA1 to UCA8). Red starburst annotations highlight the cells for FEAT1, FEAT2, FEAT3, and FEAT4, indicating suspect links between these features and the use cases.

# Accelerating the global software delivery lifecycle

IBM Rational Software Development Platform, v7.0

## Flexible, integrated test management across distributed teams

- Easily configure, control and enforce global test management processes
- Single-point lifecycle management of testing *and* project change
- Transparency through integrated test analytics via project and portfolio dashboards
- **Result:** Single point, real-time view of global delivery status with lifecycle analytics

## Closed-loop software delivery management

- IBM Rational Build Forge for automated build and release management
- Rational and Tivoli integrations for tracking and auditing assets in production
- **Result:** Closed loop management from requirements *through* production

## Extended compliance support

- Improved lifecycle traceability of globally distributed artifacts
- Announcing:
  - Compliance Management service offering, web-based training and new Redbook
  - Rational Unified Process Plug-in for Compliance Management
- **Result:** Comprehensive view of compliance-related artifacts with dashboard reporting

# The hub for life-cycle management

*Govern the test and development process*

## IBM Rational ClearQuest

Test Change Defects

- Single project view
- Global test project coordination
- Configurable, enforceable processes
- Extensible test ecosystem

## Single project view

*Single solution to manage tests, defects and project change*

### Benefits:

- **Single reporting solution for all development metrics**
- **Traceable, auditable relationships between development, test and project artifacts**
  - ▶ Manages test planning, test results, quality metrics, and defects
  - ▶ Central repository with integrated version control
  - ▶ Comprehensive, customizable quality metrics reports
  - ▶ Centralized user management

# The problem with unmanaged change

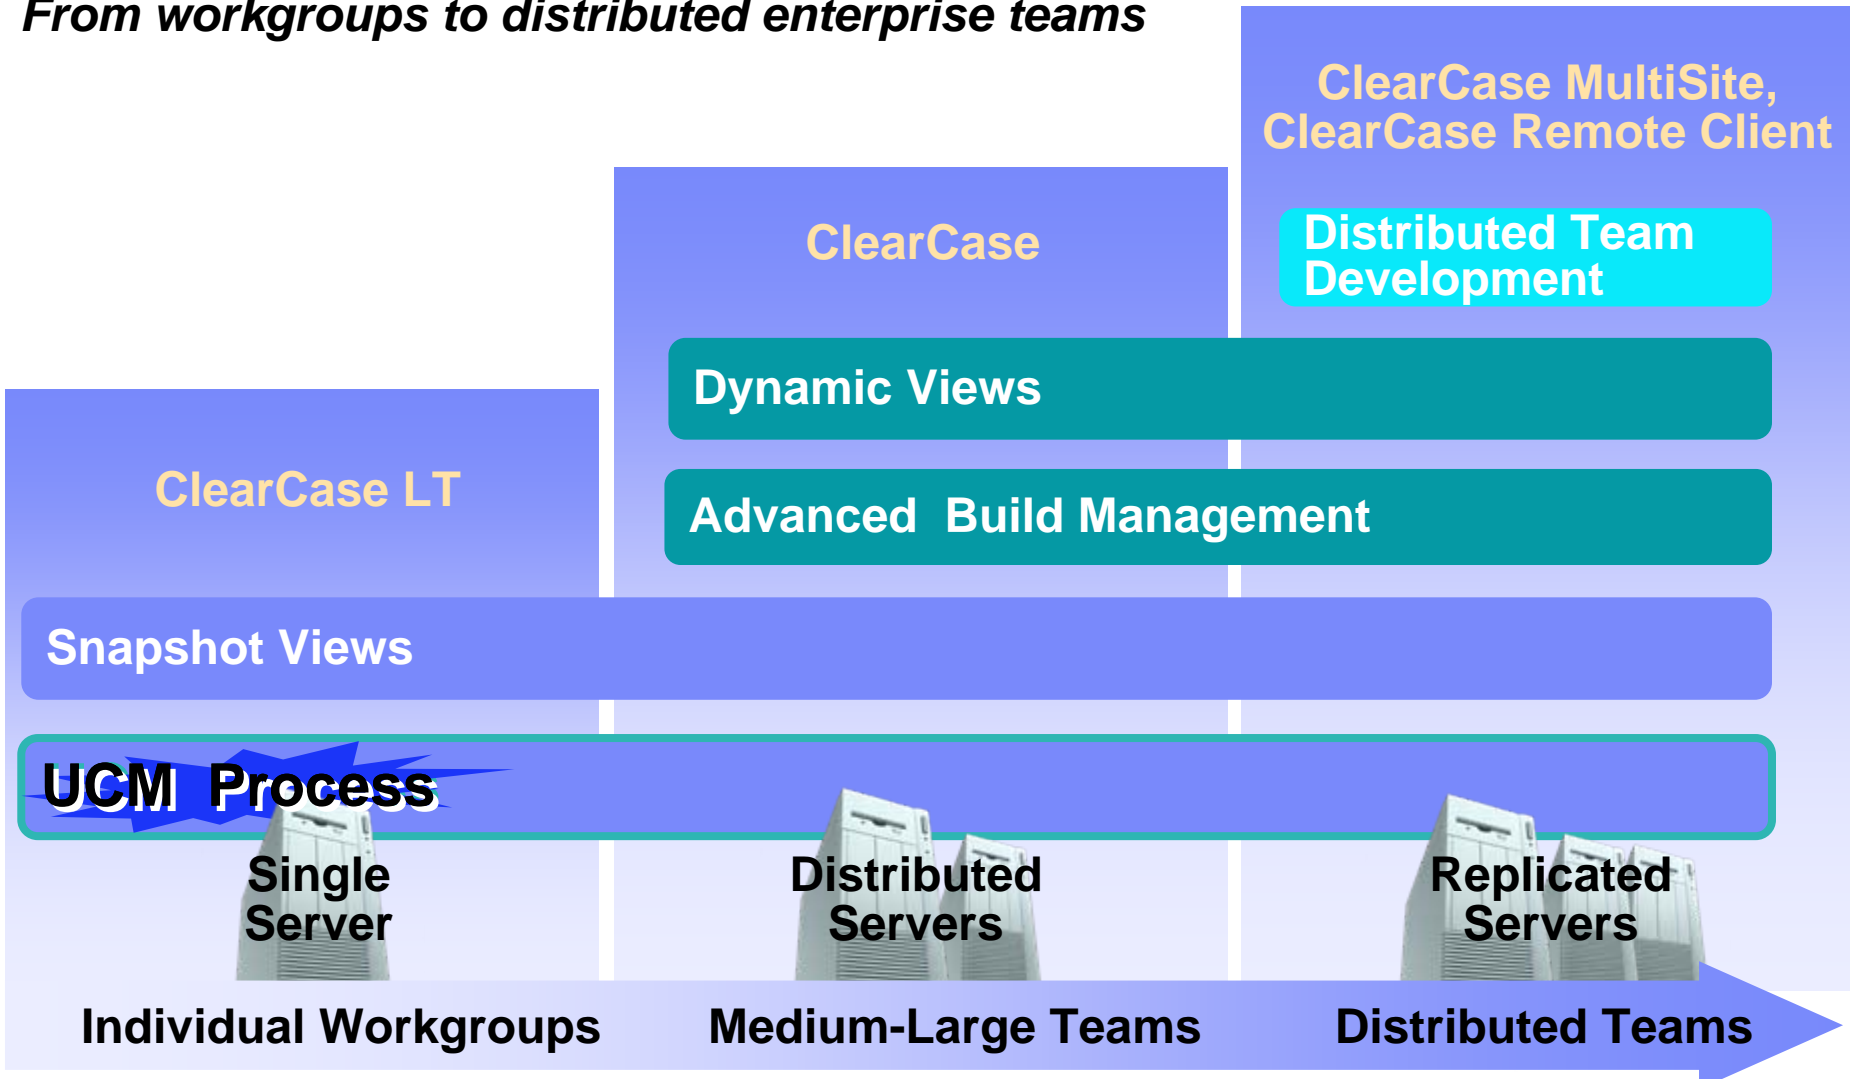

***Slow releases, poor quality, no predictability***

- Poor release integrity
  - ▶ Files get lost and cause recurring problems
- Quality depends on error prone, redundant tasks
  - ▶ Manual examination of builds
  - ▶ Manual mapping of files to tasks
  - ▶ Manual merging of changes
  - ▶ Manual activity reporting
- Lack of communication
  - ▶ What to work on?
  - ▶ What's important?
- Difficult to determine project status
  - ▶ No connection between activities and assets

# Managing and Automating the Process

# Today's Build & Release Challenges

## Current Conditions

- **Manual**, error-prone build processes
- Proprietary, **internally-developed** build systems
- **Inconsistent processes** for different products and platforms
- **Dependence on the build team** for execution, status, and troubleshooting
- **Separation** of developer **environments** from production systems
- Difficult and **time consuming to resolve** problems
- **Compliance**

## Business Impact

- **Unpredictable** product release cycles
- **Costly** systems to support & maintain with knowledge held by few
- More work requires more people – **limited repeatability or portability** for new projects and platforms
- Burdens staff and requires **increased headcount** to take on new projects
- **Unreliable** nightly and group builds

*“Software build management increasingly impacts successful software deployments, business and IT productivity and is becoming a focus for IT organizations.” - IDC*

## BuildForge – What's Our Value

*“We were able to improve from 18 builds per week to over 360 builds per week! Across 50 other projects, that will save us \$75 Million annually!” -- Adobe*

**Customer results:** higher productivity, improved quality, faster delivery, reduced cost

- ▶ **Reduced cost of software delivery** through standardized processes, team efficiency, and effective asset leverage, and hardware usage
- ▶ **Increased quality of products** delivered through reliable, repeatable processes and rapid error detection.
- ▶ **Decreased overall time to market** through more frequent, iterative development cycles
- ▶ **Integrated management decision support** and compliance by providing critical information about your build and release life cycle

# The Goal: Global, Bidirectional Lifecycle Traceability

- ▶ Reduce the cost of compliance
- ▶ Demonstrate line-of-site over regulatory mandates
- ▶ Help enforce a secure and audit-ready development environment

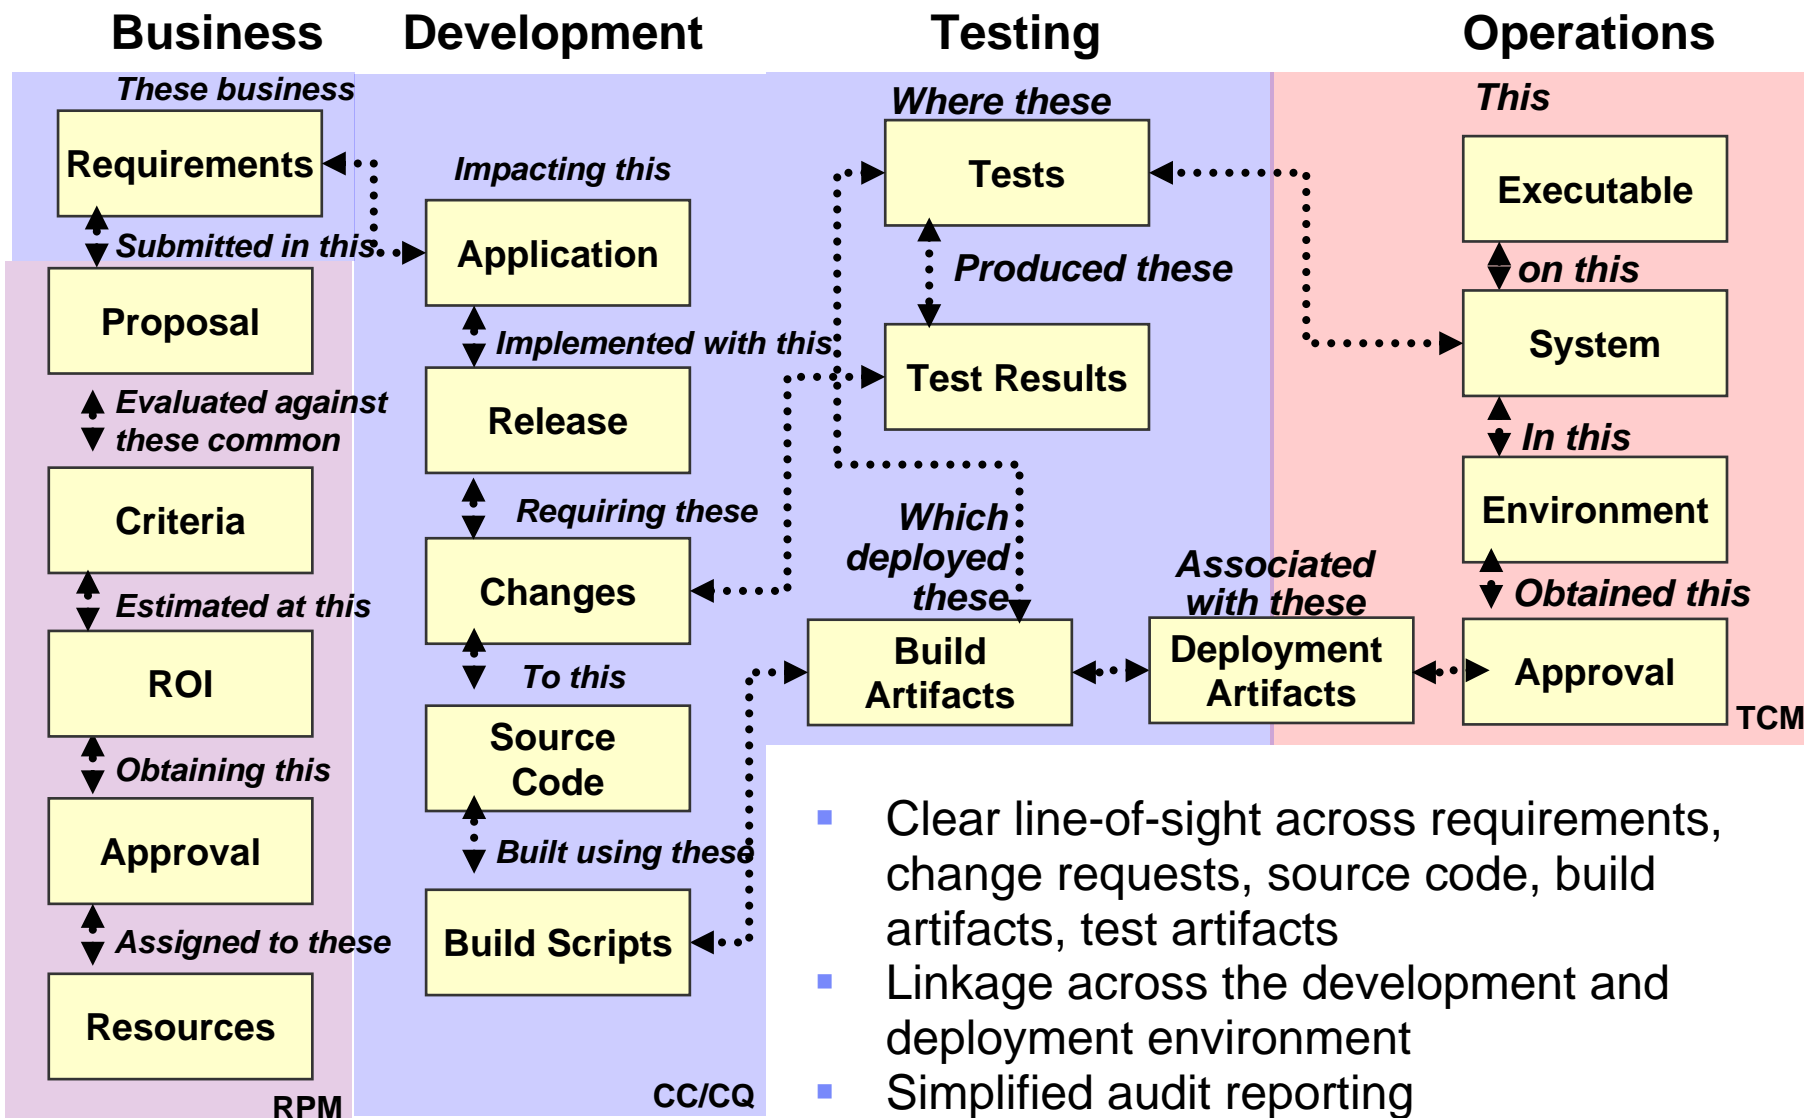

# Before: Incomplete traceability, cumbersome linkages

- Inability to link development & deployment
- Inability to answer:
  - ▶ What functionality is available where?
  - ▶ Who signed off on release? Test results?
  - ▶ Is the same executable deployed across all locations?

# After: Clear line-of-sight across development and deployment

- Clear line-of-sight across requirements, change requests, source code, build artifacts, test artifacts
- Linkage across the development and deployment environment
- Simplified audit reporting

# Agenda

- Adding value to your software
- Business problems and solutions that impact software and systems delivery
- Governance with IBM Rational Software Development Platform
